**Mobile Phone Retailer uses Google Apps and gDocScan to bypass the IT Department**

Hoover AL – July 11, 2011 - Tim Levy, co-founder of mobile phone retailer [Mo's Mobiles](#), is using Google Apps to bypass the IT department — and he is pretty happy with the results.

Mo's Mobiles has 94 locations throughout Australia and more than 150 employees.

As with many growing businesses, Levy wanted a technology platform that would keep up with a rapidly changing industry and ensure his dispersed group of young retail staff had access to the right information. So he went to the Cloud.

"Importantly for me, we have no IT staff," he said. "I find small and medium businesses run their businesses faster than their IT department can catch up. It's such a bottleneck, and businesses like Google that really get the Cloud allow people like me to add functionality to their business."

"For Cloud document management, we use gDocScan ®, which lets us scan documents to the Google Cloud, and search the documents", said Tim Levy.

Jim Geer, President of gDocScan developer Executive Technologies, Inc, said "We are pleased to welcome Mo's Mobiles to the growing family of organizations deploying gDocScan for affordable Cloud document management.

"gDocScan is particularly suited to organizations with multiple locations, because you can scan from the multiple locations to Google Docs and everyone from any location can search and view the documents."

gDocScan is operational on Windows 2008/7/XP/Vista/2003 platforms.
